POWERBACK

is a bionic spine that is surgically installed by a professional from the company. The reason why PowerBack exists is to allow elderly people to move freely again and people with disabilities to walk again.

The idea of PowerBack was made by AI. Our super computers have made all the neurological connections with the nervous system of the human. And from there PowerBack has created the bionic back harness, to support the installed bionic spine in the first months.

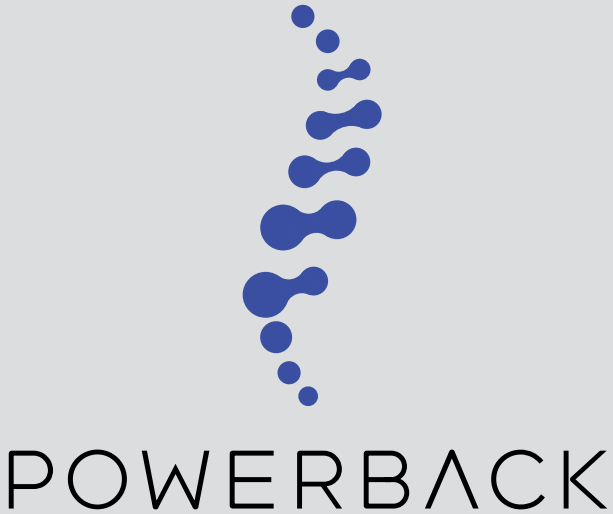

Now that the technology is widely available, this style guide is created to unite all communication and promotion in a clear and attractive manual.

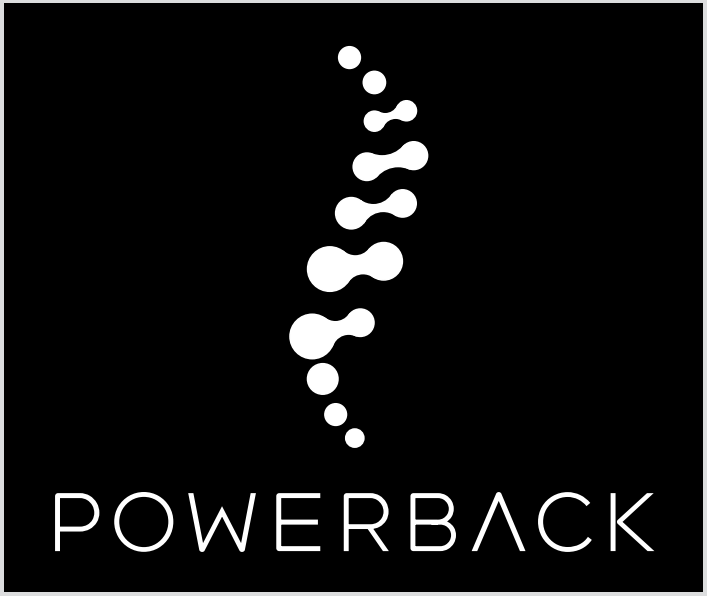

THE LOGO'S

STANDARD LOGO

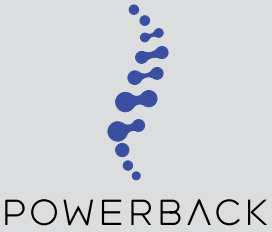

Primary Logo

The primary logo is the original and most recognizable logo. It must be used in almost all mediums. It is the identity of PowerBack.

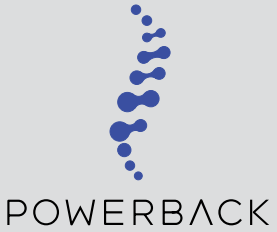

White version

Minimum white space:
Web: 132px x 132px
Print: 35mm x 35mm

The minimum width of the logo cannot be below 1/4th of the original size.

LOGO VARIATION

Alternative Logo

The alternative logo is to be used when the original doesn't fit in the vertical logo placement area. This version also allows for a more compact and low profile placement on products.

Minimum white space:
Web: 530px x 100px
Print: 140mm x 132mm

The minimum width of the logo cannot be below 1/4th of the original size.

LOGO DO NOTS

Do not use any colours not mentioned in the colour section of the style guide.

Do not distort, warp or add effects to the logo.

Make sure that the logo is visible. Check if there is contrast between the background and the logo.

TYPOGRAPHY

TYPOGRAPHY

Havelock Titling -- titles font

Havelock is the only font PowerBack uses for its titles. It conveys a technological and professional appearance. Its used to attract the attention to the headings. The font is only in capitals by its own design. In products it is recommended to use Havelock Titling Medium.

HEADING 1 (30pt)

HEADING 2 (24pt)

HEADING 3 (18pt)

Gotham -- body font

Gotham is the font used for all body text. Its clean, easy to read and very customisable. Also retaining PowerBacks professional appearance. For text its recommended to use Gotham Book, **Medium or Bold** for reading.

Officien tiamus dolupta tibearcil int ut untiandit et re magni tem. Lam, consed eos a volore quosand enemoles etur seraecusa volor suscius quate nonsendis ero beriam, imus archici milit, odiam nus ut labora necere parum ini dolut ex exeriate officitate resequi ducieni hillautatiis se et laboritint. Picium faces asitat qui sum aligentus sit

(12pt)

COLOUR

Colour usage

PowerBack blue

The main representative colour for PowerBack. The colour is used to highlight the important headers, blobs and the logo.

RGB: 59 80 161

CMYK: 89 79 1 0

HEX: #3B50A1

White

White is mainly to use on text to provide sufficient contrast. White cannot be used for the blobs, only for text, background and the white variant of the logo.

RGB: 255 255 255

CMYK: 0 0 0 0

HEX: #FFFFFF

Black

Black is used for text. And as background for contrast.

RGB: 0 0 0

CMYK: 100 100 100 100

HEX: #000000

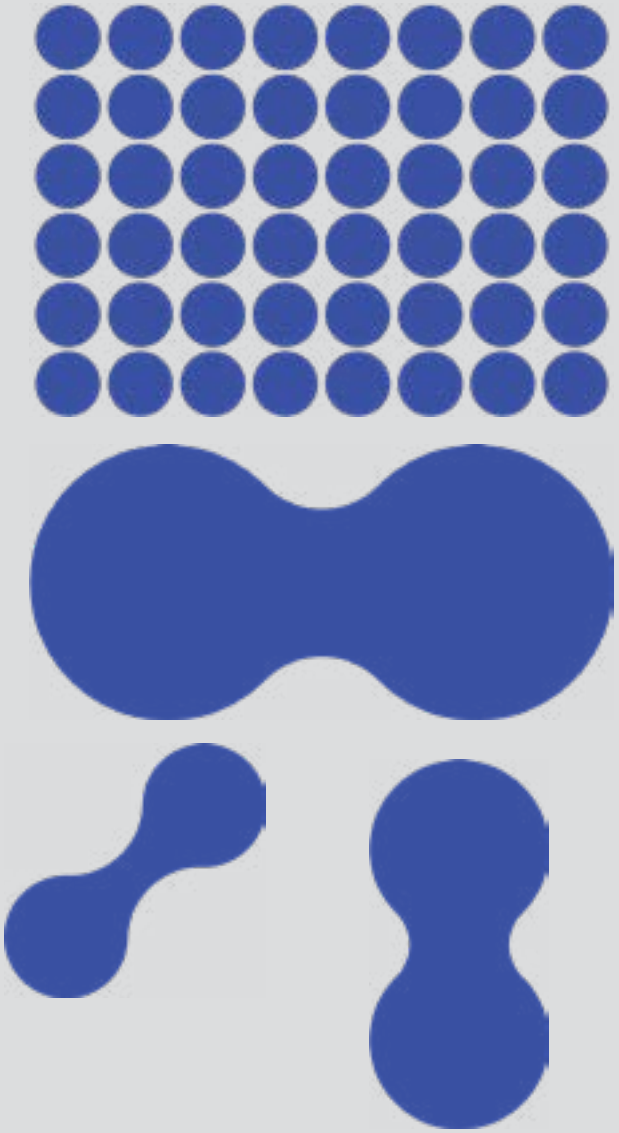

Blobs

The blobs are a graphic that shows the biologcal and mechanical aspect of Power-Back

They are used in the design as a recurring pattern thats changes with each itteration. This makes it so that as everything is biological it can never be the same.

Use

Blob distance and size are up to the designs requirements. Meaning that the medium decides the size and distance. But be carefull if its too far, close or small the organic connection won't work. It is important when using the "* **Metaball arc** " pluggin that the "**center angle**" is set to 90 degrees.

APPLICATION

TEASER AND POSTER

WE FOUND THE
SOLUTION FOR
YOUR BACK PAIN

HAVE THE POWERBACK INSTALLED
AND ENJOY A HEALTHY PAIN FREE
LIFE

GO AND ENJOY LIFE

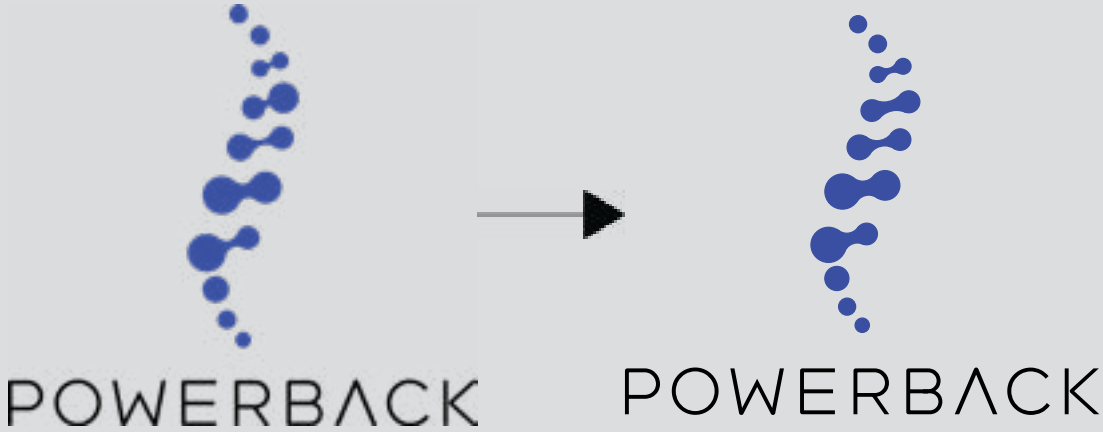

REFLECTION

REFLECTION

In the course of building PowerBack i have gradually evolved my design and concept. That concept being a bionic spine that is inserted by a professional surgeon. Later I came up with the name PowerBack, it means taking the power back over your body and life.

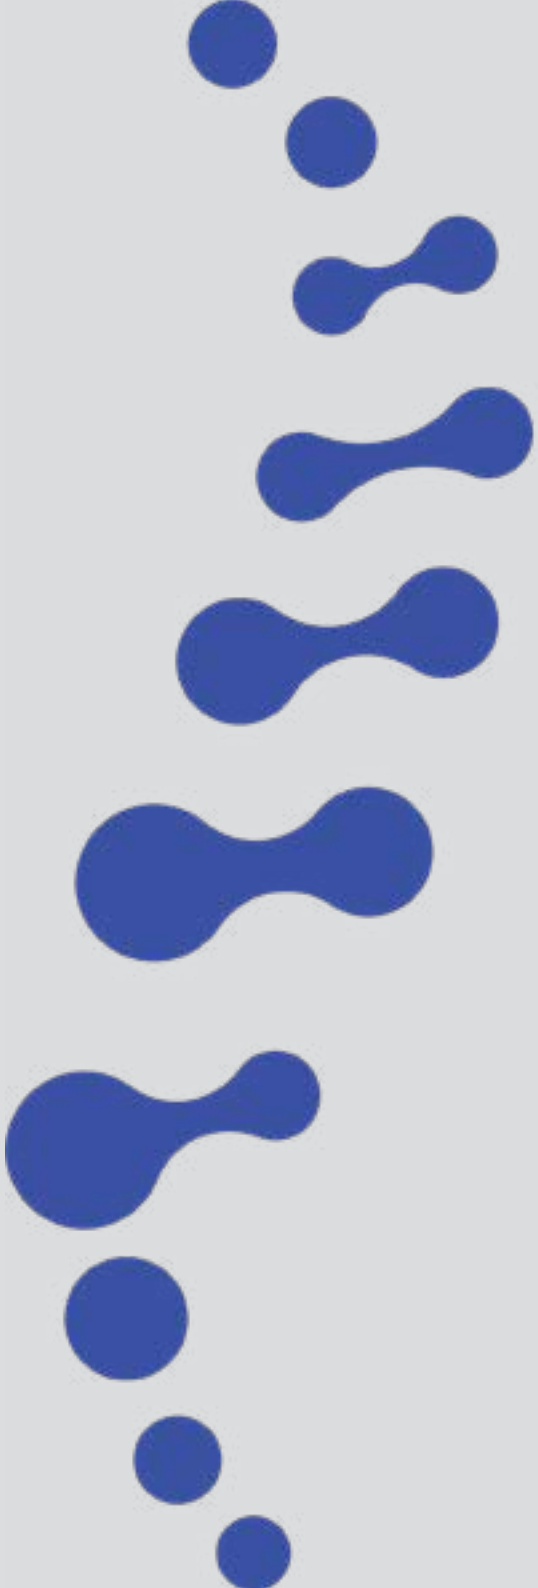

PowerBack

I started at first with an idea of incorperating electric circuit board style nodes and connections, But that didn't fit with the idea of PowerBack being a medical device. So I researched some more and found blobs that looked biological. And when arranged in a grid I could make a design that found a balance between the biological and mechanical aspects of PowerBack.

Later I started tweaking the design. The blobs where difficult to make, so I later found a plugin that creates the connection between two cirkels. Making each blob almost the exact same.

Throughout the design journey I learned new skills and new insights. This project tought me that consistency and experimentation are key to a succesfull design.

TAKE THE POWERBACK
